ATMOSPHERE MONITORING SERVICE

CLIMATE CHANGE SERVICE

2001-2010

The operational forecasting system 2015

9 km

- High resolution forecast (HRES): twice per day
16 km 137-level, to 10 days ahead

18/36 km

- Ensemble forecast (ENS): twice per day
51 members, 32/64 km 91-level, to 15 days ahead

36 km

- Monthly ENS extension: twice a week (Mon/Thursdays)
51 members, 64 km 62 levels, to 46 days ahead

- Seasonal forecast (SEAS): once a month (coupled to ocean model)
41 members, 80 km 91 levels, to 7 months ahead

- Ocean wave forecasts (HRES, ENS and SEAS)

- Re-forecasts for calibration of ENS and SEAS

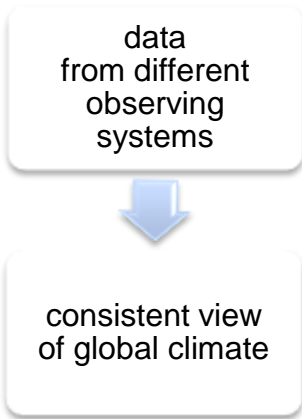

- Reanalyses for atmosphere and oceans

Upcoming resolution upgrade (spring 2016)

ECMWF planned reanalysis productions and data volumes

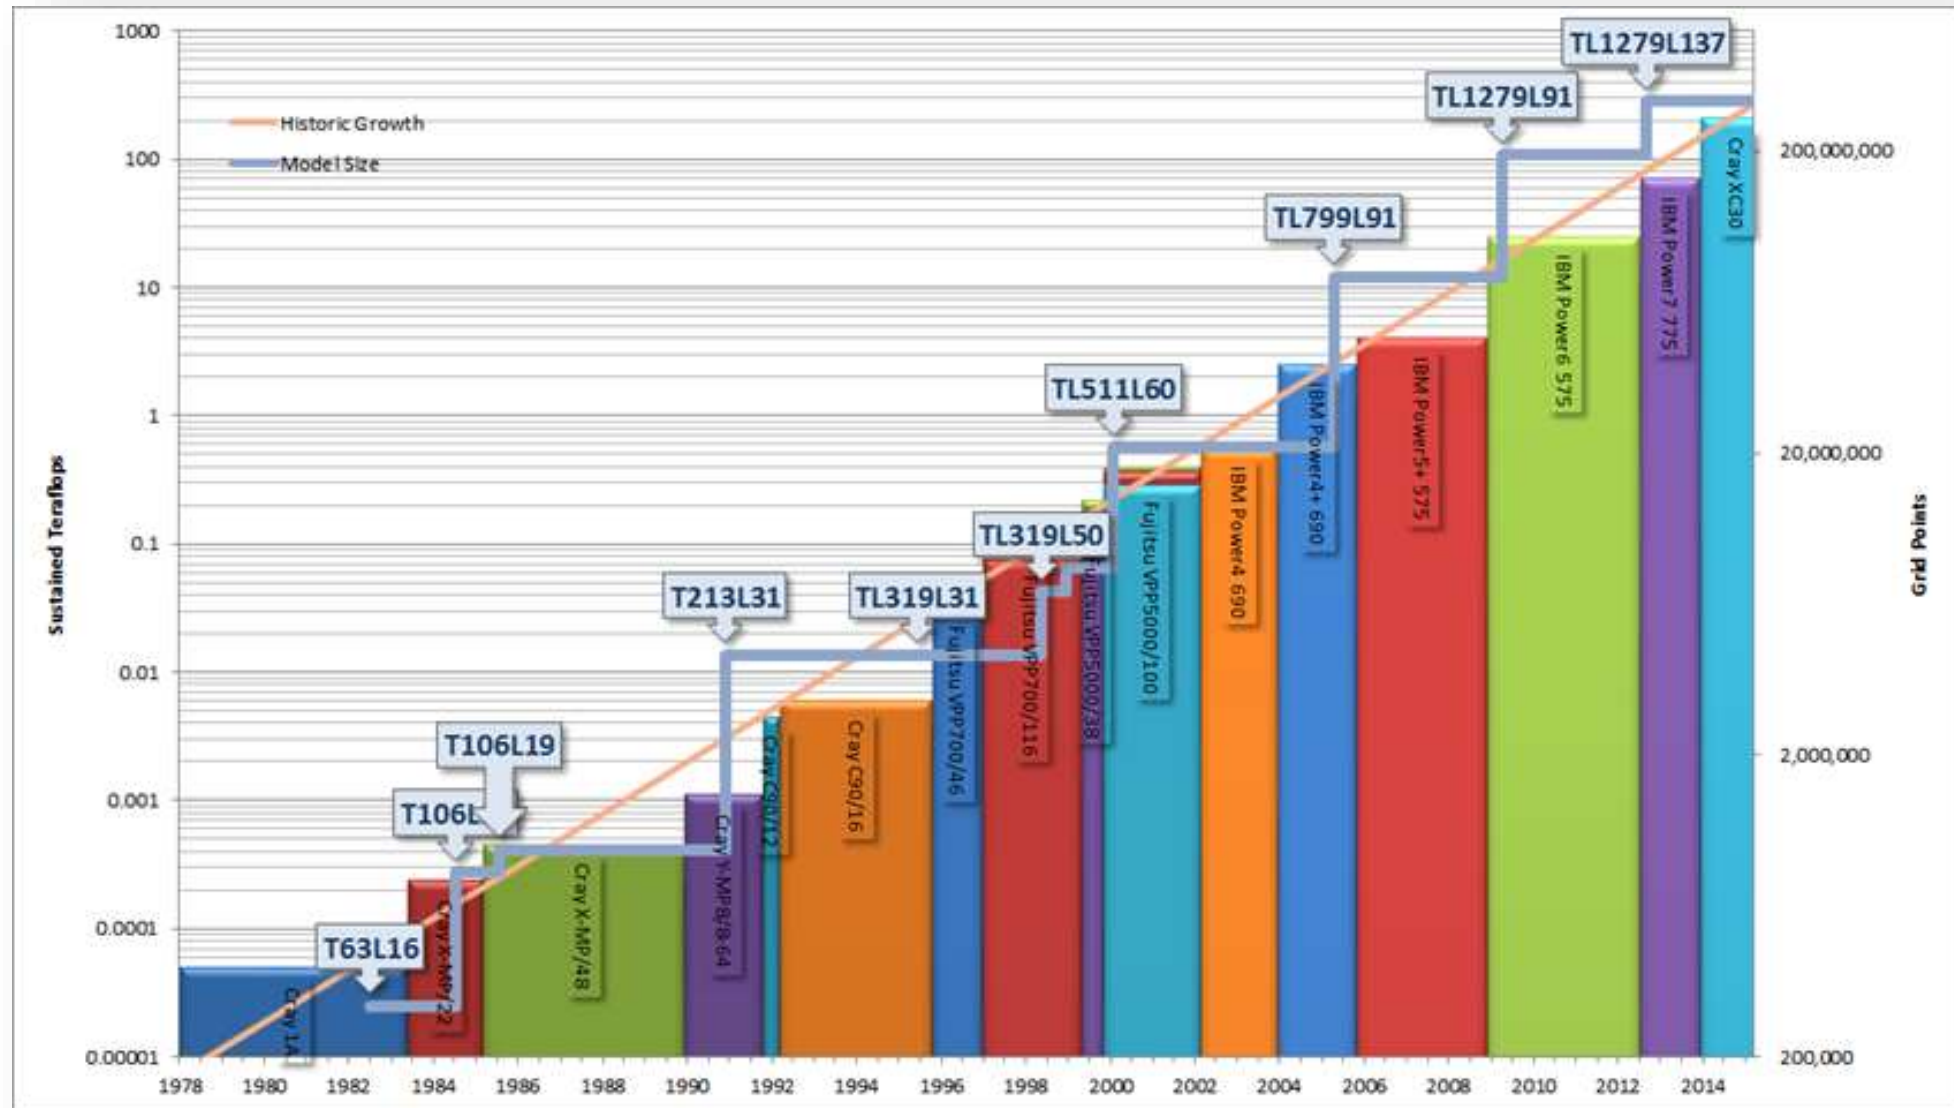

Reanalysis productions	2014	2015	2016	2017	2018	2019
ERA-Interim ERA-Interim/Land	1979–NRT, 79km resolution				50Tb	
ERA-20C ERA-20CM ERA-20C/Land	20th-century atmospheric reanalysis 1900–2010, 125km resolution				300Tb	
ERA5 ERA5/Land	ERA-Interim successor 1979–NRT, 31km resolution				1.5Pb	
CERA-20C CERA-20C/Carbon	20 th -century atmos / ocean reanalysis 1900-2010, 125km/1x1				5Pb	
ERA6 ERA6/Carbon	ERA5 successor coupled with ocean?				10Pb

Evolution of model resolution and HPC sustained performance

ECMWF's High Performance Computing Facility

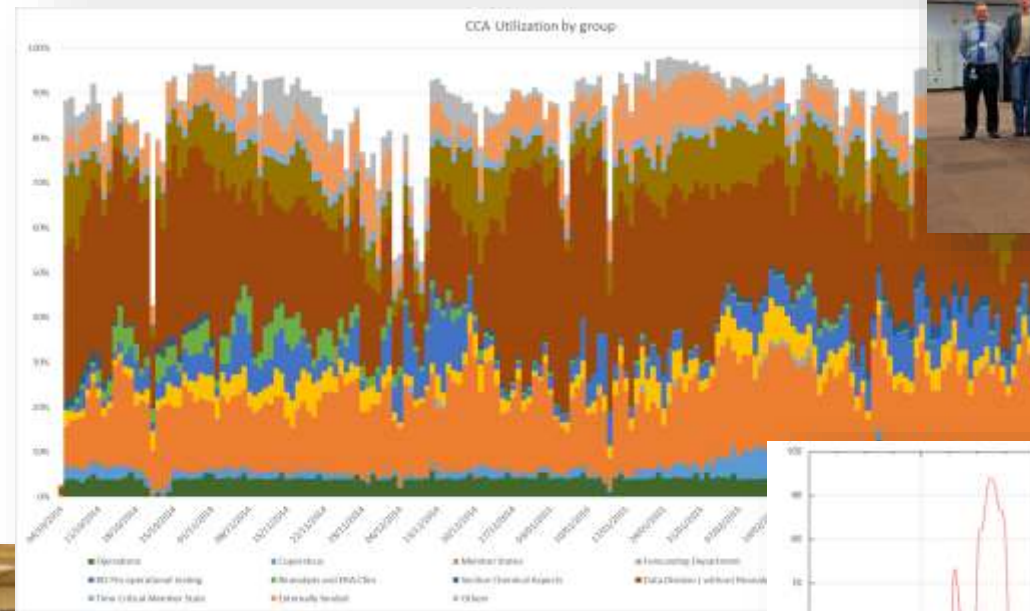

HPCF Configuration – Cray XC-30

Compute clusters	2
Sustained performance on ECMWF codes (teraflops)	200
EACH COMPUTE CLUSTER	
Parallel Compute nodes	3,400
Pre-/Post-processing	100
Compute cores	84,000
High Performance Parallel Storage (petabytes)	7
General-purpose storage (terabytes)	38
EACH COMPUTE NODE	
Memory in compute node (gibibytes)	64 (60 x 128, 4 x 256)
Processor type	Intel E5-2697v2 "Ivy Bridge"
CPU chips per node	2
Cores per CPU chip	12
Clock frequency (gigahertz)	2.7

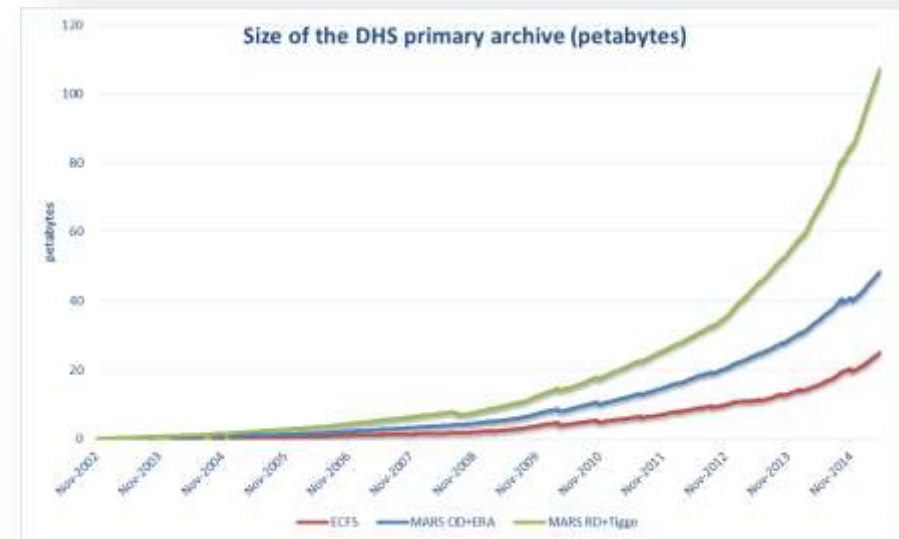

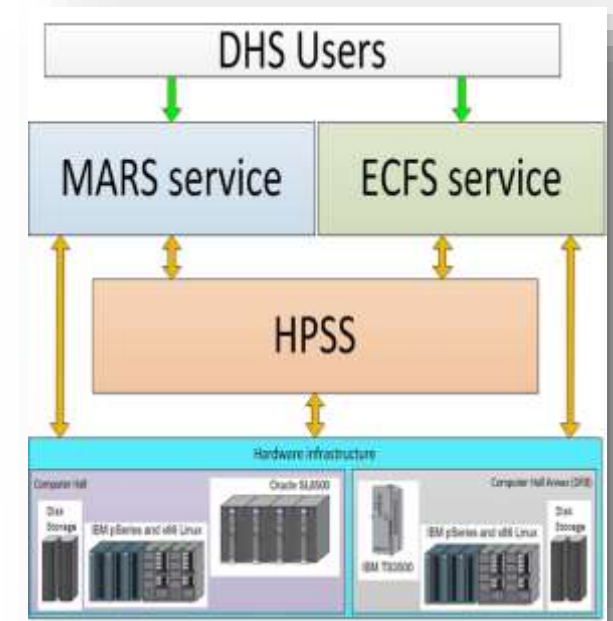

Migration to the new HPC

- Installation
- Acceptance
- Applications
- Scheduling
- I/O performance
- Service availability
- Support

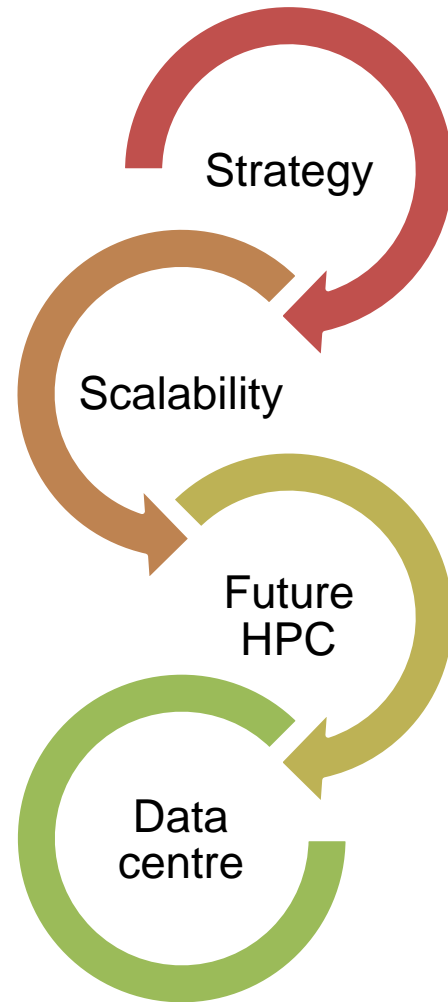

Data Archive

- Data archival and retrieval system for all ECMWF data
 - 123PB primary data (Sept 2015)
 - Adding ~135TB/day
- Large meteorological archive
 - Direct access from Member States
 - Available to research community worldwide
- User access via ECMWF developed applications
 - MARS – Meteorological Archival and Retrieval System
 - Access via “meteorological terms”, e.g. fields
 - ECFS – ECMWF Common File System
 - File based access for non-meteorological data

Challenges?

What is the challenge?

Today:

	Observations	Models
Volume	20 million = 2×10^7	5 million grid points 100 levels 10 prognostic variables = 5×10^9
Type	98% from 60 different satellite instruments	physical parameters of atmosphere, waves, ocean

Tomorrow:

	Observations	Models
Volume	200 million = 2×10^8	500 million grid points 200 levels 100 prognostic variables = 1×10^{13}
Type	98% from 80 different satellite instruments	physical and chemical parameters of atmosphere, waves, ocean, ice, vegetation

**Factor 10
per day**

**Factor 2000
per time step**
