NWSC-2: NCAR’s Next Generation Procurement
Disclaimers

Nothing in the Request for Information (RFI) or this presentation should be construed as a Request for Proposal (RFP) and no offers are to be submitted at this time.

UCAR reserves the right to discontinue plans to procure the NWSC-2 Computing Platform with no responsibility to interested parties. UCAR will not be responsible for costs incurred by companies that respond to this RFI or to any subsequent RFP, and will not reimburse companies for such costs.
Outline of Talk

• Strategic Objectives and Procurement Highlights
• NCAR user community and current computing environment
• Yellowstone Workload Study
• Schedule
• Outline of the Draft Technical Specification
  – Base system performance
  – Technical Options
  – Benchmarking
• Request for feedback
• Q&A and other sources of information
NWSC-2 Strategic Objectives

1. Provide a highly productive, data-intensive HPC resource for NCAR users and applications that builds on the design and success of the Yellowstone computing complex

2. Ensure that users remain productive throughout the transition to NWSC-2, and beyond

3. Invest in new architectures and technologies that are anticipated to be prevalent in systems in the next 5-10 years

4. Enable application optimization and refactoring efforts required to make use of these technologies
NWSC-2 Highlights

1. Deploy a highly efficient, usable, and reliable HPC resource that achieves 2-5x the performance of Yellowstone

2. Deploy a high performance storage and parallel file system that achieves a FLOPS/BYTE ratio of 250.

3. Integrate with NCAR’s existing high-performance, GPFS-based storage system

4. Enable the transition to future architectures by providing capability that new processors, storage technologies, and software

5. Provide flexible technical options, including: many-core nodes; GPGPU nodes; DAV nodes; storage expansion; innovative storage and memory technologies; future expansions of HPC system and storage; maintenance.

6. Deploy the system in 2H-2016 for a production availability of January 1, 2017

7. Estimated funding $30M available through a Best Value procurement

8. Deploy the systems at the NCAR-Wyoming Supercomputer Center in Cheyenne, WY
Over 1000 users, and 200 applications from the Atmospheric and Related Sciences

Yellowstone use since start of production

- Climate, Large-Scale Dynamics: 53%
- Ocean Sciences: 9%
- Weather Prediction: 6%
- Fluid Dynamics and Turbulence: 8%
- Geospace Sciences: 9%
- Atmospheric Chemistry: 4%
- Earth Sciences: 3%
- Mesoscale Meteorology: 3%
- Computational Science: 3%
- All Others: 2%
Current Computing Environment (1)

Yellowstone
HPC resource, 1.5 PFLOPS peak

GLADE
Central disk resource
16.4 PB

High Bandwidth Low Latency HPC and I/O Networks
FDR InfiniBand and 10Gb Ethernet

NCAR HPSS Archive
160 PB capacity
~11 PB/yr growth

1Gb/10Gb Ethernet (40Gb+ future)

Science Gateways
RDA, ESG

Data Transfer Services

Remote Vis

Partner Sites

XSEDE Sites

Geyser
Caldera
DAV clusters

Pronghorn
Phi testbed

NCAR
HPSS
Archive
160
PB
capacity
~11
PB/yr
growth

FDR
InfiniBand
and
10Gb
Ethernet

Yellowstone Workload Study Gives Insights into NCAR’s Current Workload
NWSC-2 Schedule

Subject to change

- **October 20, 2014**: Released Draft Technical Specification (DTS) and Yellowstone workload study
- **December 19, 2014**: Feedback on DTS due
- **January 31, 2015**: Benchmarking files and instructions available
- **April 1, 2015**: Formal Request for Proposals available
- **May 1, 2015**: Proposals due
- **2H-2015**: Vendor selection, negotiation, NSF approval
- **2H-2016**: Equipment delivery, acceptance, friendly-user
- **January 1, 2017**: Production
- **December 2017**: Decommission Yellowstone
# Outline of the DTS

## Technical Options

<table>
<thead>
<tr>
<th>Technical Option</th>
<th>Guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td>§4.1 Many-core partition</td>
<td>Development work may be required. In proposing a delivery date for the many-core component, Offeror should consider market maturity, reliability, and programming model, among other criteria.</td>
</tr>
<tr>
<td>§4.2 General Purpose GPU</td>
<td>General market availability of the GPGPU is assumed. If exercised, some quantity is expected at initial system delivery. Subsequent quantities are possible.</td>
</tr>
<tr>
<td>§4.3 Parallel File System</td>
<td>Upgrade to performance and/or capacity of PFS. Specific quantities and delivery date will be negotiated at award. Subsequent quantities are possible.</td>
</tr>
<tr>
<td>§4.4 Visualization, Data Analysis and Post Processing</td>
<td>General market availability assumed. If exercised, some quantity is expected at initial system delivery. Subsequent quantities are possible.</td>
</tr>
<tr>
<td>§4.5 Software Tools and Programming Environment</td>
<td>General market availability assumed. Tools that are part of Technical Options that require development may be deployed with corresponding technology.</td>
</tr>
<tr>
<td>§4.6 Early Access System</td>
<td>Minimum configuration for NCAR Simulation Suite due 6-months prior to initial system delivery. Other configurations will be negotiated as part of specific technical options that are exercised.</td>
</tr>
<tr>
<td>§4.7 Innovative Storage and Memory Technologies</td>
<td>Development work may be required. Offeror should propose a delivery date consistent with general market availability.</td>
</tr>
<tr>
<td>§4.8 Maintenance, Support, and Technical Services</td>
<td>Enhanced services beyond the base §3.13 services. Offeror should propose incremental enhancements, if applicable, as described.</td>
</tr>
</tbody>
</table>
Benchmarking Elements

- Target sustained performance of 2x-5x increase over the Yellowstone platform using the NCAR Benchmarking Suite (NBS): NBS is a suite of compact application kernels designed to reflect the NCAR workload. Result to be submitted with proposal.
  - *The Offeror’s proposal shall state a minimum Sustained Performance as measured by the geometric mean of the NBS constituent applications.*

- The system shall achieve, at acceptance, on average, a 2x-5x Capability Improvement over the Yellowstone platform. Codes for Capability Improvement are a subset NBS.
  - *Capability Improvement is defined as the product of an increase in problem size and an application-specific runtime speedup factor. For example, if the problem size is 4 times larger and the runtime speedup is 1.25, the capability improvement is 5x*
Your feedback is critical

Feedback on the DTS should be submitted by 4PM, MDT on December 19, 2014 per the instructions in the Letter to Interested Parties.

- should focus on the clarity of our Draft Technical Specifications document, functional descriptions, options, available technology, benchmarking approach, schedule, and any other areas you deem to be relevant;
- should provide your rationale for proposed changes or additions to a Technical Specifications Document that would be issued with any RFP;
- will not be shared with others unless they are incorporated into the anticipated RFP;
- may or may not be incorporated into the anticipated RFP.
